

Focus & Attention Games

1. Color Tap

Tap only the target color while distractions of other colors appear on screen. The color written will also have a different font color to improve focus and impulse.

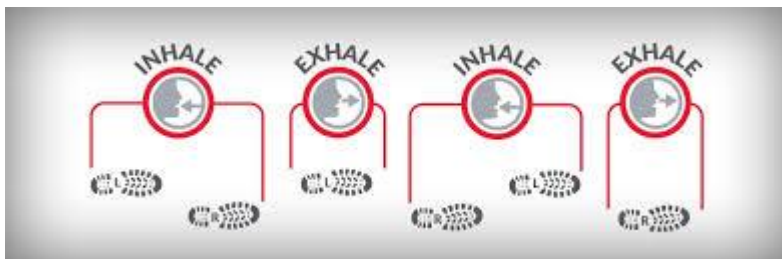

Builds: selective attention, impulse control

2. Breathing Rhythm

Follow expanding and shrinking circles with breathing patterns. Animations can help make this easier. Instructions on holding down your left and right nostril and Pranayama and stuff.

Builds: calm focus, emotional regulation

3. Sound Hunter

Listen for a specific sound among background noises. A bunch of random noises can be like a car horn or a vacuum cleaner and in the midst the user has to click when they recognize the target audio like rain drops.

Builds: auditory focus, concentration

4. Freeze Switch

Quickly switch between “move” and “freeze” commands. Very self explanatory. This one will need a lot more gamification for it to be appealing.

Builds: reaction control, attention shifting

5. Distraction Dodge

Complete a simple task while popups/distractions try to interrupt. Like drag an object across a maze, sort colors and shapes into boxes while a bunch of fake ads or funny unrelated items pop up.

Builds: sustained attention

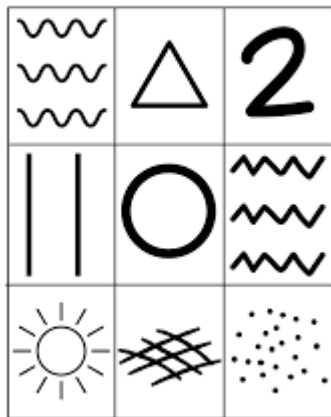

Memory Games

1. Pattern Recall

Memorize sequences of lights, symbols, or sounds. Then ask which sound was third or which symbol was not shown and things like that. Builds multitasking skills as well because eyes and ears are at work.

Builds: working memory

MEMORY CHALLENGE

2. Object Tray

Memorize objects on a tray before they disappear. Then ask what object was supposed to be there.

Builds: visual memory

3. Story Builder

Remember and repeat details from a growing story. The details can be based on what the user needs to work on - emotion intelligence means the story needs to have key details on

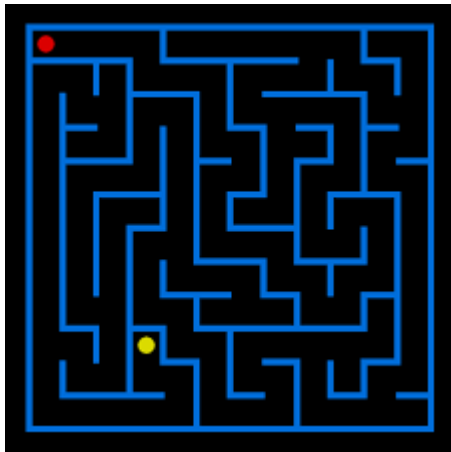

how actions affected others and the user needs to comprehend it. If the user literally needs to work on memory then any complexish story would work. (ideally would use an ai generator for it)

Builds: sequential memory

4. Path Memory

Watch a path through a maze, then recreate it. But, the twist is - after the user confirms they remember the pattern, the maze is complicated and a lot more paths are added. The original path is still the same, everything else is added as a distraction.

Builds: spatial memory

5. Emotion Match

Match facial expressions or emotions after brief viewing. The emotions obviously have to be a lot more complex than happy or sad. The faces also have to be associated with a story and after a bunch has been shown the user can be quizzed on remembering a person based on the story or based on the emotion, or the other way around.

Builds: social awareness + memory

Resilience & Emotional Strength Games

1. Storm Balance

Keep a boat balanced through waves using steady movements. Tapping and holding down parts of a boat will help offset the effects of the waves trying to displace it. Emphasis on gamifying this one too.

Represents staying calm under stress.

Builds: emotional regulation, resilience

2. Thought Sort

Sort thoughts into “helpful,” “unhelpful,” or “unknown.” The user lists all their thoughts for a day or week or when they get it - and then sort them.

Builds: cognitive reframing

3. Growth Garden

Plants grow when users complete calming or reflective tasks. A garden growing over time represents progress and gives the user a sense of completion.

Builds: consistency, positive habits

4. Emotion Compass

Identify emotions from scenarios and choose coping responses. They get points for good coping responses and gets an explanation for incorrect or unhelpful coping responses.

Builds: emotional intelligence

Cognitive Flexibility & Problem Solving

1. Rule Switch

The game suddenly changes rules mid-round, and the games can be any of the ones from above.

Builds: adaptability, mental flexibility

2. Shape Shift Puzzle

Pieces change function or orientation unexpectedly. Instead of traditional puzzle pieces, they are all weird and make the user think a lot more deeply about how the pieces should match.

Builds: flexible thinking

3. Multi-Task Relay

Handle two simple tasks at once without overload. The screen is split into 2 and 2 fingers have to do 2 simple but different things.

Builds: divided attention

Calmness & Mindfulness Games

1. Zen Sand

Create patterns in sand or water with slow movements and music.

Builds: relaxation, mindfulness

2. Cloud Drift

Guide clouds slowly through obstacles using gentle controls. Similar to subway surfers in a way.

Builds: patience, stress reduction
